Do you have patients on a “DIAGNOSTIC ODYSSEY” as they undergo a variety of tests, travel to different specialists, and spend a lot of time, energy, and money seeking a diagnosis?

Arriving at a diagnosis should be easier so that our patients can move forward with an understanding of their condition, prognosis, and treatment options.

The DISCOVER Program at NewYork-Presbyterian/Morgan Stanley Children's Hospital and ColumbiaDoctors is the first program for undiagnosed diseases in New York State. The goal of the DISCOVER Program is to integrate excellent clinical care with state of the art research to expedite accurate clinical and molecular diagnosis.

Our services are available to patients and families of all ages with significant medical conditions who seek a diagnosis. We provide access to advanced genetic and genomic technologies, genetic counseling, personalized case management and coordination, and referral to a larger network of over 50 specialists. We will also provide patients with the opportunity to enroll in cutting-edge research studies with the vision to move beyond diagnosis toward the development of innovative treatments.

TO INITIATE A REFERRAL, PLEASE CONTACT OUR COORDINATOR AT 212-342-4622 OR BY EMAIL AT thediscoverprogram@cumc.columbia.edu

The program includes
✓ Comprehensive review of records
✓ Coordinated evaluations across specialists
✓ Opportunities for research
✓ Assistance with insurance and financial challenges
✓ Support in adjusting to the diagnosis
